

SALO Careers

Title	Project Manager
Role	Oversee and coordinate technical and scientific projects
Location	Remote
Type	Full time with benefits

At Salo Sciences we're working to reduce catastrophic wildfires and conserve forests as a means to fight climate change. Join our growing team of scientists and engineers building solutions for conservation and climate change mitigation around the planet. You'll be working on our next-generation conservation technology system: the [Forest Observatory](#). As we expand the scope of the Observatory to cover more regions and map new patterns of environmental change—including wildfire risk and carbon sequestration—we are hiring a project manager to plan and coordinate technical development and customer/partner outreach.

About us

[Salo Sciences](#) is a conservation technology company. Our mission is to accelerate solutions to climate change and biodiversity loss by guiding investments in natural climate solutions: conservation, restoration & improved land stewardship. We use three tools—satellite data, artificial intelligence & ecological modeling—to identify conservation opportunities, monitor ecosystem health & predict environmental change.

Last year we teamed up with [Planet](#) to build the California Forest Observatory, a tree-scale forest monitoring system mapping the drivers of fire behavior at high resolution. The Project Manager will help coordinate and guide the expansion of this system to new geographies and markets.

Primary responsibilities

- Develop project roadmaps in collaboration with leadership and technical teams
- Work closely with engineering and data science teams to plan and track progress on technical deliverables
- Interface with existing customer and partner organizations
- Develop and share progress reports with external organizations
- Organize and maintain internal documents and communications
- Document internal and external meetings and provide summaries to relevant teams
- Manage internal and external communications, including maintaining social media accounts on Twitter and LinkedIn

Required qualifications

- 3+ years of software, technical, or scientific project management
- Jira software experience
- Demonstrated capacity to independently coordinate multiple projects simultaneously
- Exceptional communication skills and attention to detail

Preferred qualifications

- A degree in the natural sciences
- Understanding of ecology, wildfire, natural resources, or related fields
- Experience using GIS systems
- Expert user of Google Workspace products

Start date

Immediate (posted 07-30-2021)

How to apply

Send your application to careers@saloi.ai. Please include the following.

1. Email subject line: "Saloi: project manager"
2. Your resume or curriculum vitae
3. A one-page (maximum) cover letter describing your fit for the position
4. Optional: relevant appendix material (GitHub account, links to current/previous projects)
